3. Quality Checklist

Before submitting, check that:

- [x] The README identifies the team, module, project purpose, and locations of the materials.
- [x] The module outline covers the intended scope and follows a logical learning sequence.
- [x] Development status is clearly labelled, with gaps and uncertainties acknowledged.
- [x] V1.0 contains substantive explanations and at least one coherent, well-developed topic—not only headings or plans.
- [x] The developed material includes a worked example, an application activity or question, and an explained answer or expected outcome.
- [x] Important claims and sources have been checked, and borrowed material is acknowledged.
- [x] Another member has reviewed the content, and a concrete review outcome is documented.
- [x] Repository evidence shows actual development and supports each member's claimed contribution.
- [x] The package includes Markdown sources, supporting assets, a readable PDF, and the submission report; it can be assessed without opening external links.
- [x] Significant AI use is documented in the relevant logs, and members can explain the content and their own decisions.

1. README has all the tekvant informations needed
2. The module covers each scope in detail and a clear chronological procedure
3. All labelled and acknowledged
4. Yes, it even included images and detailed explanation
